

Product Overview

LOW WATTAGE LIGHTED STAIRNOSING

PRODUCT CODE: WOES008

For full electronic specifications you will need to contact us. The stairnosing electronics can be custom engineered to suit your specific requirements.

Generally we recommend 12V application along with modified power supply units, which eliminates power loss resulting in the lights being somewhat dimmer at the extreme end of runs.

Each individual step light will be provided with two color matched end caps to the 90-degree end cuts. (Note that all angled cuts that differ to 90 degree, cannot be provided with "end caps")

Our lights are very high quality LED's, and can be color selected to your choice of RED - BLUE - WHITE - GREEN - AMBER. The lights are spaced at 200mm off-set start and end centers between upper and lower lights.

The stairnosing sizes are recommended to be in multiples of 200mm. EG 200mm - 400mm -600mm -800mm -1000mm and so on.

This is the most economical method of sizing; they can be up to 4.2 mt continuous lengths.

The profile and PVC antislip insert can be custom colored to suit; there may be quantity minimums applied in some cases.

SOLID aluminium profile alloy 6060 temper T5. Anodised to 25 um. (Heritage building specification).

**Please note: In order to improve the quality and performance of the lighted stair nosing, specifications may change without notice.*
